

SABINE

MUSIC ACCESSORY CATALOG

Sabine changed the way musicians tune-up when we introduced the first ST-Tuner in 1986. Now we are the world leader in tuner technology, producing a complete line of innovative and affordable tuners designed to satisfy the needs of every player. And we've expanded that leading-edge thinking and applied it to include metronomes, phrase trainers and effects pedals. This condensed catalog gives you a taste of our line of music accessories – all built with pride and backed by our two-year warranty.

For more information visit Sabine.com or call 800-626-7394 for individual product brochures.

AX2000W is available in 3 wood tones – burl (shown), rosewood, and teak.

AX2000 SERIES Guitar-Mount Chromatic AutoTuner

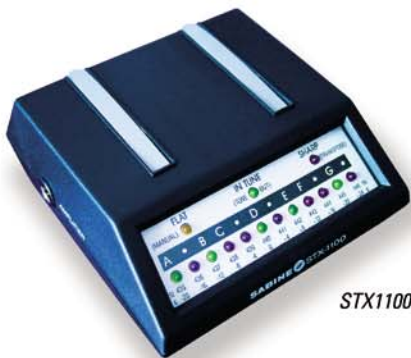

The most innovative tuner in the world is now even better. The AX-Tuner mounts on your acoustic or electric instrument with our built-in SafeMount™ pad (works like a Post-it™ note) and tunes with the InTouch™ built-in contact mic. The cordless AX2000 grabs notes faster and holds them longer, so you can tune your instrument when it's way too noisy for open air tuners.

- Chromatic — perfect for standard & alternate tunings, and tuning with a capo
- For electric & acoustic guitars, basses, mandolins, violins, dulcimers, & most other stringed instruments
- IndiColor™ Three-color display — flashes yellow for flat, red for sharp, and green for in-tune
- Auto-recalibration — matches the pitch of any instrument
- DomeHome™ hard shell case included
- Long-life lithium batteries included

AX2000

TUNERS

STX1100

STX1100 Chromatic AutoTuner

The STX-Tuner has been the best-selling chromatic tuner in the USA since 1991. The STX1100 features fast, automatic note sensing and bright, easy-to-use LED display with contrasting LEDs that indicate guitar notes. Advanced tuner technology grabs notes faster and holds them longer. Rugged design and broad chromatic range make this tuner the choice of the pros. Use the ¼" input and output jacks or the built-in microphone. Handy clips hold the tuner on your music stand. Includes one-touch auto-recalibration and sleep-mode battery saver.

Now with three new features, all for the same low price!

- **Transpose Function:** Display notes in any key
- **Manual Recalibration:** Change overall calibration from 435 to 445 Hz
- **Tone Generator:** Outputs tone over a two-octave range

New Rack Tuners

RT7100 Features

- **Swoop LED Display:** The best visual cue for easy tuning, especially from a distance. It works like a bar graph of your pitch, sweeping up for sharp & down for flat.
- **Bright & Easy to Read:** Huge note indicator is visible from across the stage, even if you're wearing shades!
- **Dual Tuning Modes:** Standard Mode gives you a bar graph reading of your pitch. Strobe Mode shows moving sweep of pitch. Both are more accurate than conventional needle-style LED displays.
- **Two independent channels:** Select on front panel or with foot switch.
- **SmartSwitch™ A/B circuit:** The RT7100 senses your input/output configuration and automatically adjusts the A/B switch to conform to your setup. Need two guitars routed to the same amp? Or one guitar split to two amps? No problem – just plug 'em in and you're ready to go!
- **Flat Tune:** Set to any of four different flat tunings: ½, 1, 1½, or 2 steps below standard pitch. Play and tune your guitar normally but at a lower overall pitch!
- **Calibration:** Change the overall calibration of the tuner from 435 to 445 Hz.
- **Mute:** Mute your instrument for silent tuning select on front panel or with foot switch.
- **Built-in Mic:** Tunes almost any acoustic instrument.
- **Dual Jacks:** Front and back panel input/output jacks.
- **Automatic Note & Sharp/Flat Sensing**
- **Chromatic:** 7-Octave range, perfect for guitar and bass; works all the way down to a low A!
- **Heavy-Duty Metal Case:** Built for heavy road use.
- **Built-in power supply** – No wall warts!

RT7000 Features

- All the same great features except:
- Standard A/B switch between channels
- Output jacks on back panel only
- Instrument plug in only (no built-in mic)

NEX5000 Tuner

- Automatic & Chromatic
- Large, bright, sweeping LED display – looks like a bar graph of your pitch!
- Flat Tuning: Shift scale down 1, 2, 3, or 4 half steps
- Calibrate: From A=438 to 445 Hz

Easy-change battery – just squeeze the buttons and the lid lifts off

ZIPBEAT-6000 Digital Metronome

- Loud, Clear Tone
- Accented Downbeat from 2 to 6 beats per measure
- Speed adjusts from 40 to 206 beats per minute
- Multi-Function Sweep LED Display
- Tone Generator, A=440-445 Hz
- Stand for easy viewing
- Free 9-Volt Battery included
- Two-Year Warranty

FREE EARPHONE!

CM1 Contact Microphone

Attached to your acoustic instrument, the CM1 allows you to plug into your Sabine tuner for easy tuning in noisy environments. A soft suction cup holds the mic to your instrument. Comes with 2 meter cord and standard ¼" phone jack.

TA1 Power Adapter

Plug in power for the Sabine STX-Tuners and the MT8000. (Input: 120V, 60 Hz, 9W; Output: 9VDC, 300 mA)

NEXPOWER Adapter

Plug in power for NexFX Pedals. Powers up to 6 pedals with Power Patch cords (included with each pedal). (Input: 120V, 60 Hz, 14W; Output: 12VDC, 500 mA)

RTPED2 Foot Switch

Two-switch foot pedal (cable attached) for the RT7000 Series Rack Tuners. Use one switch to change channels and the other to activate the mute function.
