## MUSIC ACCESSORY CATALOG

Sabine changed the way musicians tune-up when we introduced the first ST-Tuner in 1986. Now we are the world leader in tuner technology, producing a complete line of innovative and affordable tuners designed to satisfy the needs of every player. And we've expanded that leading-edge thinking and applied it to include metronomes, contact tuners, and all-in-one accessories. All our music accessories are built with pride and backed by our two-year warranty.

For more information visit [www.Sabine.com](http://www.Sabine.com) or call 800-626-7394.

## TUNERS

AX3000-W in burl wood finish

### AX3000 SERIES NEW! Guitar-Mount Chromatic AutoTuner

The Sabine AX Contact Tuner changed the way we think about tuners. The AX-Tuner mounts on your acoustic or electric instrument and tunes with the InTouch™ built-in contact mic. The new AX3000 grabs notes faster and holds them longer, so you can tune your instrument when it's way too noisy for open air tuners.

#### Grabs Notes...

The new AX3000 responds instantly to your note, and holds it longer for easy tuning. It grabs those low notes all the way down to the 5-string bass, and the highest ones on mandolins. The new MagnaPad magnifies the note for the contact mic and Sabine's super-fast tuning circuit beams the note's status to the three-color LED display.

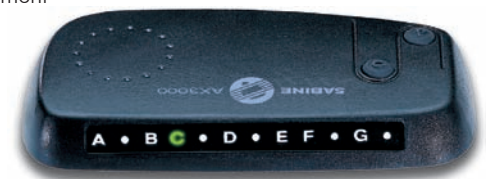

#### And Grabs Guitars...

The MagnaPad: This new 21st century material has a phenomenal ability to stay put, yet releases with a twist – just like a magnet. Pull the AX straight up and the tuner won't budge, but give it a twist and it comes right off. This new material works by attraction, not adhesion, so it leaves your guitar's finish alone.

- Chromatic – perfect for standard & alternate tunings, and tuning with a capo
- For electric & acoustic guitars, basses, mandolins, violins, dulcimers, & most other stringed instruments
- MagnaPad - easy to mount and remove the AX - works just like a magnet
- IndiColor™ Three-color display - flashes yellow for flat, red for sharp, and green for in-tune
- Auto-recalibration – matches the pitch of any instrument
- DomeHome™ hard shell case included
- Long-life lithium battery included

Now with the MagnaPad™:  
Magnifies notes for better tuning;  
attach or remove from your instrument  
like a magnet!

## RACK TUNERS

RT7100  
MADE IN USA

### RT7100 Features

- **Big Swoop Display:** The best visual cue for easy tuning, especially from a distance. It works like a bar graph of your pitch, sweeping up for sharp & down for flat.
- **Bright & Easy to Read:** Huge note indicator is visible from across the stage, even if you're wearing shades!
- **Dual Tuning Modes:** Standard Mode gives you a bar graph reading of your pitch. Strobe mode shows moving sweep of pitch. Both are more accurate than conventional needle-style LED displays.
- **Two independent channels:** Select on front panel or with foot switch.
- **SmartSwitch™ A/B circuit:** The RT7100 senses your input/output configuration and automatically adjusts the A/B switch to conform to your setup. Need two guitars routed to the same amp? Or one guitar split to two amps? No problem – just plug 'em in and you're ready to go!
- **Flat Tune:** Set to any of four different flat tunings: 1/2, 1, 1 1/2, or 2 steps below standard pitch. Play and tune your guitar normally but at a lower overall pitch!
- **Calibration:** Change the overall calibration of the tuner from 435 to 445 Hz.
- **Mute:** Mute your instrument for silent tuning. Select on front panel or with foot switch (RTPED2 pedal sold separately).
- **Built-In Mic:** Tunes almost any acoustic instrument.
- **Dual Jacks:** Front and back panel input/output jacks.
- **Automatic Note & Sharp/Flat Sensing**
- **Chromatic:** 7-Octave range, perfect for guitar and bass; works all the way down to a low A!
- **Heavy-Duty Metal Case:** Built for heavy road use.
- **Built-in power supply-** No wall warts!

RT7000  
MADE IN USA

### RT7000 Features

All the same great features except:

- Standard A/B switch between channels
- Output jacks on back panel only
- Instrument plug in only (no built-in mic)

# NexTune 6z & 12z

## DIGITAL TUNERS

**Both NexTunes Feature:** Superior Sabine Digital Tuning ■ Automatic Note Sensing ■ Built-In Mic and Speaker ■ Instrument Input ■ Built-in Folding Stand ■ Compact Size ■ **Two Displays:** Big LCD with simulated needle ■ Three-color LEDs

NexTune 6z

### NexTune 6z-Guitar/Bass Tuner

- Guitar Mode
- Manual Calibration, 438 - 443 Hz
- Bass Mode – tunes 5-string basses
- Big note indicator
- Tone generator for tuning and ear training:  
4 octave range (A#2 to C#6)

NexTune 12z

### NexTune 12z-Chromatic Tuner

- Chromatic – perfect for most string & wind instruments
- Manual Calibration, 438 - 443 Hz
- Big note indicator
- 7 octave tuning range
- Tone generator for tuning and ear training:  
4 octave range (A#2 to C#6)

## TUNERS

### STX1100 Chromatic AutoTuner

The STX-1100 has been the choice of professionals for over 15 years. The STX1100 features fast, automatic note sensing and bright, easy-to-use LED display with contrasting LEDs that indicate guitar notes. Advanced tuner technology grabs notes faster and holds them longer. Rugged design and broad chromatic range make this tuner the choice of the pros. Use the 1/4" input and output jacks or the built-in microphone. Handy clips hold the tuner on your music stand. Includes one-touch auto-recalibration and sleep-mode battery saver.

- Automatic Note Sensing
- Bright Multi-colored LEDs
- Quarter-inch Instrument In & Out Jacks
- Built-in Microphone
- Battery included FREE!

STX1100

**Now with three extra features, all for the same low price!**

- **Transpose Function:**  
Display notes in any key
- **Manual Recalibration:**  
Change overall calibration from 435 to 445 Hz
- **Tone Generator:**  
Outputs tone over a two-octave range

*"The industry standard for tuning accuracy."*

# METROTUNE™

## COMBINATION TUNER & METRONOME

### MT9000 MetroTune™

**Chromatic Tuner: 7-octave range (A0 to B7)**

**Metronome: 40 to 216 beats per minute**

**Tone Generator: 4-octave range (A2 to C6)**

- Big LCD display
- Compact size
- Built-in mic & instrument input
- Earphone output
- Speaker with continuous volume control
- Calibrate "A" from 430 to 449 Hz
- Loud wood-block tone, downbeats and rhythm figures

# METRONOME

### ZIPBEAT-6000 Digital Metronome

- Loud, clear, wood-block tone
- Accented downbeat from 2 to 6 beats per measure
- Speed adjusts from 40 to 206 beats per minute
- Multi-function sweep LED display
- Tone generator, A=440-445 Hz
- Stand for easy viewing
- Free 9-volt battery included

Free Earphones

ZIPBEAT 6000

## ACCESSORIES

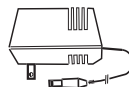

**CM1 Contact Microphone-** Attached to your acoustic instrument, the CM1 allows you to plug into your Sabine tuner for easy tuning in noisy environments. A soft suction cup holds the mic to your instrument. Comes with 2 meter cord and standard 1/4" phone jack.

**AXBAT Battery -** Lithium coin-cell battery, CR2430 3V, for all AX Tuners

**TA1 Power Adapter-** Plug in power for the Sabine STX1100, single NexFx pedal, and the MT8000. (Input: 120V, 60Hz, 9W; Output: 9VDC, 300mA)

**RTPED2 Foot Switch-** Two-switch foot pedal (cable attached) for the RT7000 Series Rack Tuners. Use one switch to change channels and the other to activate the mute function.
