

NAVIGATOR: THE NEW DIRECTION IN SOUND SYSTEM CONTROL

LOUDSPEAKER MANAGEMENT • MATRIX MIXING • SIGNAL ROUTING

Sabine's three new Navigators provide all the tools you need to arrive at a better sounding system. Using 32-bit (40-bit extended) SHARC floating point processors and high performance 24-bit digital converters, Navigators provide unlimited DSP power and superior audio performance.

FLEXIBILITY

With three units that live equally well in live sound, commercial integration, and distributed audio, Navigators define versatility. They will improve the sound quality and adaptability of sound systems in churches, schools, boardrooms, theaters, and touring and production systems at every level.

CONTROL

Full-front panel control can save the day when needed, and or lock out the front panel with multi-level password protection. Navigator Remote Control software provides a heads-up display and fast access to all parameters. Integrate Navigators into a larger system using the Ethernet or CobraNet options.

SUPERIOR SOUND

Sabine's highly acclaimed DSP engineering, which produced the industry-standard FBX Feedback Exterminator (included in every Navigator), is applied to all DSP functions including equalization, gain management, routing, and multiple crossover selections. Check it for yourself - Navigators sound better, and they come at a very reasonable price.

NAV3600: 3 in 6 out

NAV4800: 4 in 8 out

NAV8800: 8 in 8 out

WITH A NAVIGATOR, YOU'LL NEVER LOSE YOUR WAY.
