

BT-316M & BT-300

BACKTRAK™

riff decoder & digital sampler

Take it Slow, Learn it Fast!

Learn any riff the fast and easy way
with the New BackTrak BT-316M.

- 1** Sample any riff, up to 30 seconds.
- 2** Slow it down to any of 3 speeds, without changing the pitch.
- 3** BackTrak plays the riff over and over, while you play along. BT-316M saves your sample even when you turn it off!
- 4** Increase the speed setting until you're playing at full speed!

Now with 16-bit High Quality Audio and Power-Off Sample Memory!

It's pretty obvious – if you're trying to learn that hot new solo, it's much easier to practice it a little slower at first. Wouldn't it be great if you could take your favorite riff from a CD or tape, slow it down to "decode" it (without changing the pitch!), then gradually speed it up to the original tempo? Sabine made that possible with the BackTrak BT-300.

Now there's an even better way to learn that new solo – the next generation BackTrak BT-316M riff decoder & digital sampler. Record any riff, up to 30 seconds, then slow it down to your choice of speeds. And the new BT-316M sounds great at any speed. Play along as the BackTrak loops the riff over & over, then increase the speed until you've got it down! **It's that easy!** Use the BackTrak as a sampler at your gig!

For the best value and quality in "phrase trainers" visit your dealer and get one of the new Sabine Backtraks.

BTA-100 ACCESSORY PACK
Everything you need to use your BackTrak, or any personal digital sampler or stereo.

TWO-YEAR WARRANTY • MADE IN USA

LINE OUT: Connect to your amplifier to hear yourself through speakers.

SPLIT/MIXED: When listening with headphones, allows you to hear sampled music in one channel, and yourself in the other.

HEADPHONES: Plug in headphones for personal listening; adjust volume with "headphone level" control.

HEADPHONE LEVEL: Adjusts the volume level when you listen with headphones.

RECORD LEVEL: Adjust the volume of music you're recording.

PLAYBACK SPEED: Select from four playback speeds (1/3, 1/2, 2/3 or full) without changing the pitch. LED indicates present setting.

STOP: Press this button to stop recording, or playback.

PLAY: Plays your 30 second sample of music over and over, until you press "stop." Starts over again each time you press "play." Sounds great at all speeds!

RECORD: Press the "stop" & "play" buttons together to begin recording. Records continuously until you press "stop." Saves your recording in memory until you hit record again – even with power off.

LINE IN: Plug your source music in here with stereo mini-plug.

LEFT/BOTH/RIGHT: Record only the channels of source music you want.

INSTRUMENT IN: Plug your instrument in here.
